Dear Evgeny Levkov,

Congratulations on becoming a Check Point Certified Security Administrator. You now belong to an exclusive group of professionals who specialize in the field of enterprise security. As a Check Point Certified Security Administrator you have proven your ability to:

- Understand the basic features and components associated with VPN-1/FireWall-1
- Install and configure VPN-1/FireWall-1 software and components
- Modify the configuration properties to achieve the maximum security for your enterprise
- Grant selective network access to authorized remote and corporate users
- Authenticate network users with strong authentication techniques before granting access to sensitive corporate data
- Protect internal network addressing schemes and conserve IP addresses
- Deliver detailed logging and accounting information on all communication attempts

As a Check Point Certified Security Administrator, you are entitled to the following benefits:

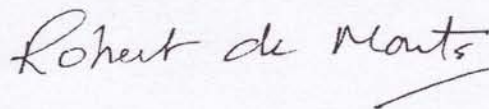

Certification Certificate: A certificate suitable for framing, which documents the certification you have achieved.

Certification Logo Rights: Identify yourself as a Check Point Professional by downloading the CCSA logos located behind the Certified Professional Only website. This Site can be accessed through your User Center account.

SecureKnowledge: You have received access to SecureKnowledge, a Web-based technical reference to help you diagnose and solve installation, configuration, and upgrade issues with Check Point Software products. Your access privileges are valid for 12 months. You may access SecureKnowledge through your User Center account.

If you have any questions about these benefits, or need further assistance please contact the Check Point Certification Team at certification@ts.checkpoint.com. Again, congratulations on your recent accomplishment.

Regards,

Robert de Monts
VP World Technical Services
